JET DW F System (Flow-line)

JET Waterflex CTP

JET DW F systems are well suited for manufacturing Afatech water washable photopolymer plates (or similar available in the market.) These ultra modern processing units produce press ready plates of excellent quality in one non-stop operation. The JET DW F systems are constructed according to the flow-line principle and consist of a washing section (3 brushes) and a pre-dryer section.

A separate, optional, exposure, Dryer and a post-exposure unit can be placed under the washer/pre-dryer. The automatic processing procedure not only guarantees a perfect and constant quality, but also saves a lot of time. All JET Waterflex systems are easy to operate and computer-controlled.

The JET DW F CTP processors are the latest addition to the range, suited for the latest generation CTP plates. It features additional brushes for an in-line mask removal during plate washing.

Type	Max. plate size	
Jet DW F 700	700	700mm wide
Jet DW F 900	900	900mm wide

- suitable for Afatech (or available Similar) water washable photopolymer plates
- high output capacity
- consistently perfect plate quality
- low noise level
- easy to maintain
- good price-quality ratio
- continuous production process
- simple operation by touch screen
- computer-controlled
- prepared for CTP plates
- Water Filtration System
