## Specialised chemical products for the tissue and textile industries as well as individual services

KAPP-CHEMIE is a medium-sized company within the chemical industry, employing approximately 100 people. The company was founded in 1970 and has been part of the STOCKMEIER Group in Bielefeld since 2007.

Our focus is on the development, production and distribution of specialised chemical products for the paper and textile industries. With our segment 'Services', individual customer solutions round off our scope of business.

In the tissue sector, flexographic printing inks and glues – particularly for the hygiene industry – paper auxiliaries, as well as cleaning agents form the core of the business. Beyond that, compounds for technical textiles, as well as process chemicals for the pre-treatment are produced. Powdered and liquid special products form another core area of our business. These products are not only developed, produced and filled, but are also customised and distributed on behalf of our clients. Furthermore KAPP-CHEMIE has much experience in tableting powdered products and filling in water-soluble plastic films.

The extensive and modern product range from KAPP-CHEMIE also shows its expertise in the area of process development. The development of new and the improvement of existing formulations are our everyday business. Taking over

application engineering work for our customers is part of our service, even at our customers' premises.

With representations in Europe, Asia, Australia and South America, KAPP-CHEMIE is internationally present.

A certified quality management system in accordance with DIN EN ISO 9001:2008 guarantees our customers consistently high quality products. Our modern in-house laboratory permanently monitors the quality of the products and of the raw materials in use.

We place great importance on environmentally sound production processes when manufacturing our products. Our major goals within environmental protection measures are the reduction or prevention of emissions, as well as the responsible and economic use of natural resources. Our commitment to protect the environment is part of our self-image and remains an essential aspect of our actions.

Customer service takes top priority. Utmost product quality, personal and knowledgeable contacts, direct customer advisory service up to complete project management support form the basis for a long-term and reliable working relationship.

A qualified, experienced and practice-oriented team is at your disposal. It acts in accordance with our philosophy.

# Tissue

## Specialised products for the tissue industry

KAPP-CHEMIE develops, produces and distributes specialised chemical products for the tissue industry. Aqueous flexographic printing inks for toilet paper, kitchen rolls, napkins, cardboards and films are core products. In addition to the flexographic printing inks, we

offer the appropriate glue systems for hygienic papers (as concentrates, ready for use or coloured). Currently we are the sole supplier of this merchandise. Our superior products are individually developed and manufactured in concurrence with our clients' input.

For almost 50 years KAPP-CHEMIE has been developing aqueous flexographic printing inks for the hygiene industry and thus counts as a pioneer on this market.

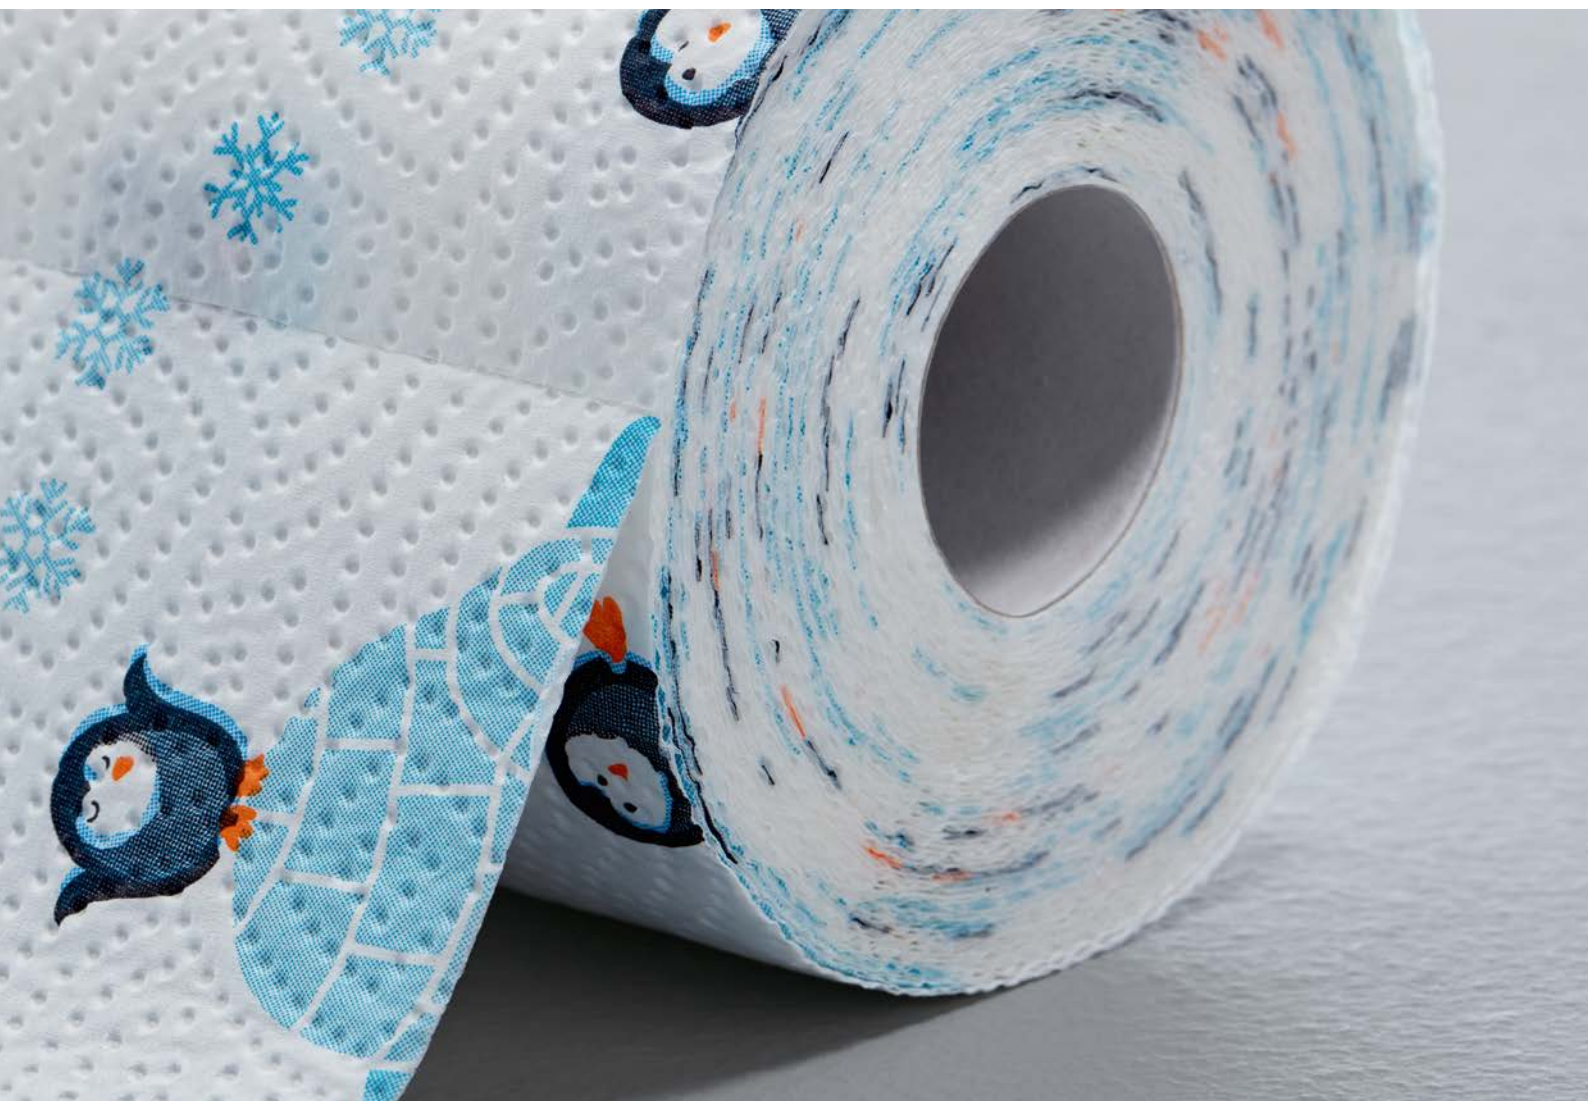

## Products at a glance

### Aqueous flexographic printing inks

KAPPAFLEX 20-0000 series for kitchen rolls and toilet paper	KAPPAFLEX 60-0000 series ink concentrates for colouring of laminating glues
KAPPAFLEX 30-0000 series for parchment printing	KAPPAFLEX 80-0000 series inks for cardboard and paperboard applications
KAPPAFLEX 50-0000 series for napkins and cores	KAPPAFLEX 90-0000 series inks for flexographic print on nonwovens

### Glues for tissue converting

KAPPASIL 200 series neutral glues and coloured systems for structural laminating
KAPPASIL 400 series for pick-up gluing
KAPPASIL 500 series for tail seal gluing

# Textile

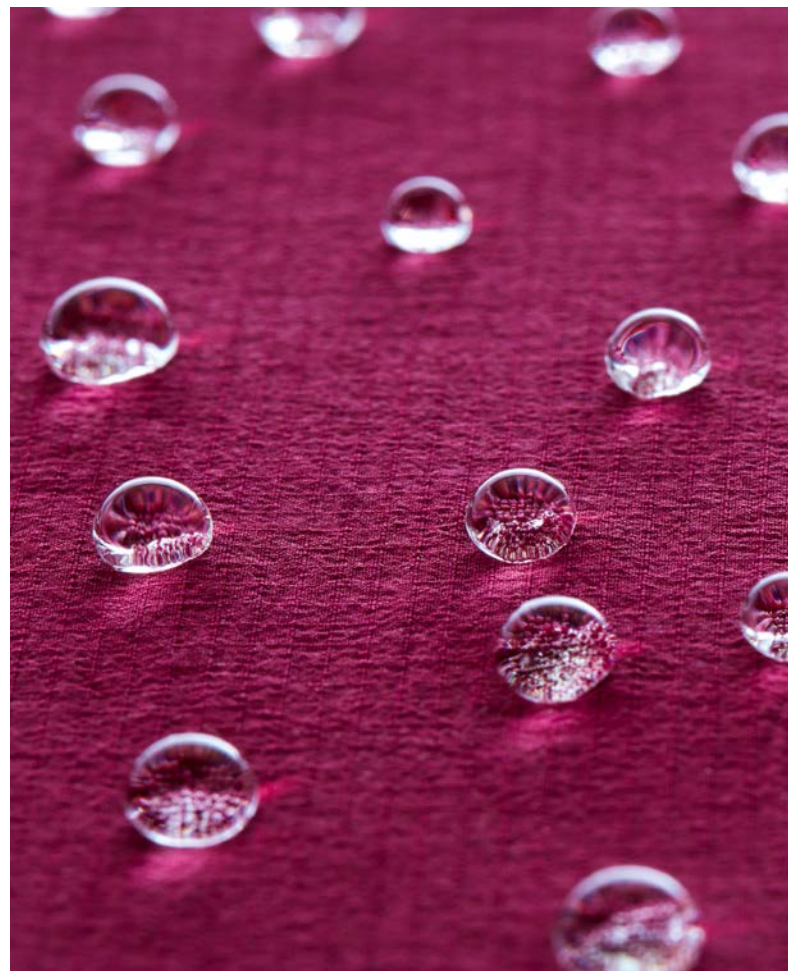

## Superior products for the textile industry

In the textile industry, our products, compounds and processes are established in all areas of textile finishing. In addition to the classical product range for process chemistry, we specialize in

effect chemicals, such as flame retardants and functional coatings. Beside the textile industry, our custom-made solutions are valued in the car, building and insulation industries.

To meet the high standards of the textile industry, we are guided by the needs of the market and thus develop solutions for individual problems. We focus on functional coatings.

# Products at a glance

## Process chemicals

Anti-foaming and spotting agents	Products for fastness improvement
Enzymes	Buffer systems
Dyeing and printing agents	Reducing and fiber protecting agents
Sequestering and dispersing agents	Stabilizers
Wetting agents and detergents	

## Effect chemicals

Anti-electrostatics	Optical brighteners
Conditioning agents	Repellents
Enzymes	Polymer dispersions
Flame retardants	Cross-linking agents and catalysts
Hydrophilising agents	Softening agents

# Services

## Individual customer solutions

Our segment Services offers individual customer solutions. Based on our customer's demands, we develop, produce and fill, as well as assemble and distribute our superior products. The focus lies on detergents, cleaning and personal

care products. We also produce additives for cosmetics and pharmaceutical products under GMP conditions. In doing so, we produce and process chemical mixed products in powder, pasty and liquid form.

Modern production plants with high performance mixing kettles, stirring units and powder mixing systems guarantee efficient manufacturing of our products. These goods meet the consistently high quality standards, you have come to expect from us.

1

### Developing

We develop new compounds for you, match and improve existing ones. We also take over your technical application work.

2

### Production

Our modern production plants featuring high performance mixing kettles, stirring devices and powder mixing systems are at your disposal. Even challenging tasks, such as the spraying of powders with liquids and the homogenization of dispersions and emulsions, can be entrusted to us.

3

### Filling

Products manufactured by us or by you in the form of liquid, pastes or powder are competently and reliably filled into tubular or side sealed bags (also made from water soluble plastic film), standard bags, big bags, cans, bottles, canisters, barrels, containers or tankers.

4

### Packaging

Coding, labelling, boxing, placing on pallets, shrink wrapping – our employees will package your orders as desired.

5

### Distribution

We offer the gamut, ranging from storage to delivery to you or your customers. Our vehicles are safe, on-time and reliable. We also provide product declaration forms and registration, as well as compile safety data sheets in different languages that meet the specific regulations of the various destination countries.

## We are part of the STOCKMEIER Group

KAPP-CHEMIE is a part of the STOCKMEIER Group. Since its founding in 1920, the STOCKMEIER Group as a family business in third generation has developed from a regional trading company to an international group of companies with approximately 1,300 employees and 44 locations worldwide.

Today, the STOCKMEIER Group comprises companies which are engaged in distribution, production and services related to chemistry. In total, over 26,000 products are traded and produced. More than 30,000 customers worldwide are provided with these services. This size and performance is inseparably connected with

the highest degree of individuality in dealing with our customers and manufacturers.

Every company within the STOCKMEIER Group is an explicit specialist in its fields of work. All unite the enthusiasm for their specific task.

All activities of the company group are oriented to long-term. We believe that long-term entrepreneurial success is only possible if we sustainably elate our existing and potential customers. It is part of the self-understanding of the KAPP-CHEMIE to be a strong, reliable partner for you and to establish a long-term, future-oriented business relationship with you.
